Krabe Kollection Website Product Requirements Document

1. Product overview

Product name

Krabe Kollection

Product type

A mobile-first, fully responsive fashion e-commerce and bespoke-ordering website built with Bubble.

Business description

Krabe Kollection is a premium Nigerian unisex fashion brand offering:

- Bespoke clothing
- Ready-to-wear clothing
- Native and African-inspired fashion
- English and formal wear
- Streetwear

The brand focuses on modernising African designs while maintaining a premium, minimal and culturally distinctive identity.

Product vision

Create a premium digital fashion experience that allows customers to discover Krabe Kollection, purchase ready-to-wear clothing, request custom-made outfits and track their orders from one platform.

The website should make bespoke fashion feel structured, accessible and trustworthy while still communicating craftsmanship and exclusivity.

---

2. Project goals

The website should:

1. Sell ready-to-wear products online.
2. Allow customers to request bespoke outfits.
3. Showcase Krabe Kollection’s collections and brand identity.
4. Allow customers to book an in-store measurement appointment.
5. Allow customers to contact the brand through WhatsApp.
6. Let customers track ready-to-wear and bespoke orders.

7. Give staff an administrative system for managing products, customers, orders, bespoke requests and communications.

Primary user actions

In order of priority, users should be encouraged to:

1. Purchase ready-to-wear products.
2. Submit a bespoke outfit request.
3. Browse the brand's collections.
4. Contact Krabe Kollection through WhatsApp.
5. Book an in-store consultation or measurement appointment.

---

3. Target audience

Age range

18–65 years old.

Gender distribution

- Approximately 60% male
- Approximately 40% female

The platform should remain visually and functionally unisex.

Primary market

Nigeria.

Secondary market

International customers who are interested in African fashion, bespoke clothing and Nigerian fashion brands.

Customer needs

Customers should be able to:

- Find clothing that matches their preferred style.
- Understand whether a product is ready-to-wear or made-to-order.
- Select available sizes, colours and fabrics.
- Request outfits based on inspiration images or personal requirements.
- Submit measurements or arrange to be measured.
- Communicate easily with the brand.
- Understand the status of their order.
- Shop confidently from within or outside Nigeria.

---

4. Brand positioning

Krabe Kollection should initially be positioned as a premium fashion brand.

Core brand attributes

- Premium
- Modern
- Minimal
- African
- Refined
- Culturally expressive
- Trustworthy
- Craft-focused

Brand differentiator

Krabe Kollection modernises African designs by combining African heritage with contemporary silhouettes, premium presentation and modern fashion influences.

Desired emotional impression

The website should communicate:

- Luxury
- African heritage
- Minimalism
- Confidence
- Craftsmanship
- Modern sophistication

Branding requirements

The final design should use the existing Krabe Kollection logo.

The following branding details will be provided or developed separately:

- Brand colour palette
- Typography
- Photography direction
- Graphic patterns
- Icon style
- Brand tone of voice
- Supporting visual elements

Claude should not invent a final logo. It may propose a complementary visual identity and design system around the supplied logo.

---

5. Product categories and information architecture

5.1 Primary shopping divisions

The website should distinguish clearly between:

Ready-to-wear

Products that are already available or produced in standard sizes.

Bespoke

Custom outfits made according to the customer’s preferences, measurements and requirements.

5.2 Clothing categories

Both ready-to-wear and bespoke collections may contain:

- Native wear
- English and formal wear
- Streetwear

5.3 Additional browsing classifications

Products may also be browsed through:

- Men
- Women
- Unisex
- New arrivals
- Best sellers
- Made-to-order
- Available now
- Sold out

5.4 Initial product scope

Accessories will not be included during the initial release.

Products may support:

- Size variations
- Colour variations
- Fabric variations
- Standard ready-to-wear products
- Made-to-order products
- Sold-out status

Sold-out products should remain visible where appropriate and display a clear “Sold Out” label.

---

6. Sitemap and required pages

6.1 Customer-facing pages

1. Homepage

The homepage should introduce the brand, promote current products and direct users towards ready-to-wear and bespoke services.

Claude should determine the final homepage hierarchy, but it should likely include:

- Main hero section
- Shop ready-to-wear call to action
- Request bespoke outfit call to action
- Featured collections
- Native, English and streetwear categories
- New arrivals
- Best sellers or featured products
- Brand positioning or story
- Explanation of the bespoke process
- Lookbook or campaign imagery
- Social media content
- WhatsApp call to action
- Newsletter or brand-update signup
- Footer navigation

2. Shop landing page

A central page for browsing all ready-to-wear and made-to-order products.

3. Product listing and collection pages

Separate or filterable views for:

- Native wear
- English and formal wear
- Streetwear
- Men
- Women
- Unisex
- New arrivals
- Best sellers
- Made-to-order products

4. Product details page

The product page should display:

- Product name
- Product images
- Price
- Product description
- Available sizes
- Available colours
- Available fabrics where applicable
- Stock availability
- Ready-to-wear or made-to-order status
- Size guide
- Quantity
- Add-to-cart action
- Delivery or collection information
- Return eligibility summary
- Related products
- Social-sharing options

Sold-out products should display a visible sold-out tag and should not be purchasable.

5. Bespoke services landing page

This page should explain:

- What bespoke clothing means at Krabe Kollection
- Available styles
- How the process works
- Measurement options
- Quote process
- Payment expectations
- Order tracking
- Expected communication process
- WhatsApp contact option
- Bespoke request form
- In-store booking option

6. Bespoke request form

Customers should be able to submit a detailed bespoke request.

The form should collect:

- Customer name
- Email address
- Phone number
- WhatsApp number if different
- Clothing category
- Native, English/formal or streetwear selection

- Intended wearer
- Outfit description
- Occasion
- Preferred colour
- Preferred fabric
- Preferred style
- Inspiration image uploads
- Required completion or event date
- Budget range
- Delivery country
- Delivery state or city
- Preferred measurement method
- Additional instructions
- Preferred communication method

The form should make clear that submitting a request does not immediately confirm the order.

The customer should receive a quote after the request has been reviewed.

7. Measurement selection page or form section

Customers should be able to choose one of the following:

- Enter their measurements themselves
- Upload an existing measurement profile
- Book an in-store measurement
- Arrange measurements through WhatsApp
- Complete the measurement process later

A measurement guide should be available to customers entering their own measurements.

8. Appointment booking page

Customers should be able to request an available date and time for:

- In-store measurement
- Optional consultation
- Style discussion
- Order follow-up where necessary

The interface should clarify that an appointment is not confirmed until accepted by Krabe Kollection.

9. Cart

The cart should display:

- Product image
- Product name
- Selected size
- Selected colour
- Selected fabric where applicable
- Quantity

- Price
- Product availability
- Remove-item action
- Update-quantity action
- Order subtotal
- Checkout action

10. Account creation and sign-in

Customers may browse the store and add products to their cart without signing in.

However, they must create an account or sign in before completing checkout.

Account creation should collect:

- Full name
- Email address
- Phone number
- Password
- Country
- Consent to relevant policies and communications

11. Checkout

Checkout should include:

- Customer information
- Delivery address
- Delivery method
- Store pickup option
- Order summary
- Card payment
- Policy acknowledgement
- Final order confirmation

Store pickup should be presented prominently and recommended where appropriate, especially when fitting or perfect sizing may be important.

12. Order confirmation page

After payment, users should see:

- Confirmation message
- Order reference
- Purchased items
- Payment status
- Delivery or collection method
- Next steps
- Link to track the order

13. Customer account dashboard

The customer dashboard should contain:

- Profile information
- Saved contact information
- Delivery addresses
- Ready-to-wear orders
- Bespoke requests
- Measurement profiles
- Appointment requests
- Order tracking
- Notifications
- Account security
- Sign-out action

14. Order tracking page

Customers should be able to track ready-to-wear and bespoke orders.

Possible ready-to-wear statuses:

- Order received
- Payment confirmed
- Processing
- Ready for collection
- Dispatched
- Delivered
- Completed
- Cancelled
- Return requested
- Returned

Possible bespoke statuses:

- Request submitted
- Under review
- Quote sent
- Awaiting customer approval
- Awaiting payment
- Payment confirmed
- Measurement required
- Design confirmed
- Fabric sourcing
- Production started
- Fitting required
- Adjustment in progress
- Ready for collection
- Dispatched
- Delivered
- Completed

- Cancelled

15. About page

The About page should explain:

- The Krabe Kollection story
- The brand’s approach to modern African fashion
- Craftsmanship
- Design philosophy
- Bespoke and ready-to-wear offering
- Brand values

16. Lookbook page

The lookbook should showcase finished designs, collections, campaign photography and styling inspiration.

17. Size and measurement guide

The guide should help customers:

- Choose ready-to-wear sizes
- Understand how garments are measured
- Take personal measurements correctly
- Know when to choose an in-store measurement instead

18. Contact page

The page should contain:

- WhatsApp contact
- Phone number
- Email address
- Store address
- Operating hours
- Social media links
- Contact form
- Map where appropriate

19. Frequently asked questions

Topics should include:

- Ready-to-wear orders
- Bespoke process
- Measurements
- Quotes
- Payment
- Delivery
- International orders
- Store pickup

- Order tracking
- Returns and alterations

20. Delivery and pickup policy

21. Returns and exchange policy

22. Privacy policy

23. Terms and conditions

24. Social media or community section

Instagram and TikTok should be prominent throughout the platform and may also have a dedicated social-feed or community page.

---

7. Ready-to-wear purchasing flow

7.1 Standard journey

1. User lands on the website.
2. User browses a collection.
3. User opens a product page.
4. User selects size, colour and fabric where applicable.
5. User checks stock availability and the size guide.
6. User adds the item to the cart.
7. User proceeds to checkout.
8. User signs in or creates an account.
9. User selects delivery or store pickup.
10. User pays by card.
11. User receives an order confirmation.
12. User receives updates through their email address and phone number.
13. User tracks the order from their account.

7.2 Guest behaviour

Users may:

- Browse without an account
- Search and filter products
- View product information
- Add products to the cart

Users must sign in or create an account before submitting payment and completing checkout.

---

8. Bespoke-ordering flow

8.1 Primary bespoke journey

1. User opens the bespoke services page.
2. User reviews how the bespoke process works.
3. User chooses one of the following:
4. Submit a bespoke request form
5. Contact Krabe Kollection on WhatsApp
6. Book an in-store measurement or consultation
7. User provides their design preferences.
8. User provides or schedules measurements.
9. Krabe Kollection reviews the request.
10. A quote is sent to the customer.
11. The customer approves or requests adjustments.
12. Payment is completed according to the approved arrangement.
13. The order enters production.
14. The customer receives progress notifications.
15. The customer tracks the order.
16. The order is collected or delivered.

8.2 Pricing

The platform should not automatically calculate bespoke prices.

All bespoke orders should use a “Request a Quote” model.

8.3 Payment

Full payment should normally be required before bespoke production begins.

For customers completing the process in-store or through WhatsApp, staff may approve a different payment arrangement manually.

The system should allow administrators to record:

- Full payment
- Partial payment
- Deposit
- Remaining balance
- Manual or offline payment
- Payment deadline

Production should not begin until the relevant payment condition has been approved by staff.

8.4 Consultation

Consultation should be optional rather than mandatory.

8.5 Response-time communication

The bespoke form and confirmation screen should tell users that requests are reviewed during official working hours.

Requests submitted outside working hours, including late-night requests, should be acknowledged automatically but reviewed during the next working period.

The final working days and hours should be configurable by the administrator.

Suggested interface message:

“Your request has been received. Bespoke requests are reviewed during our working hours. Requests submitted outside these hours will be attended to during the next working period.”

8.6 WhatsApp

WhatsApp should be the primary direct-communication channel for bespoke customers.

Prominent WhatsApp actions should appear on:

- Bespoke landing page
- Bespoke form confirmation
- Product pages where customisation is available
- Contact page
- Order details
- Relevant support sections

---

9. Search, filtering and sorting

The shop should support:

Search

Users should be able to search by:

- Product name
- Category
- Style
- Collection
- Colour
- Fabric
- Gender classification

- Keywords

Filters

Suggested filters include:

- Ready-to-wear or made-to-order
- Native, English/formal or streetwear
- Men, women or unisex
- Size
- Colour
- Fabric
- Price range
- Availability
- New arrivals
- Best sellers

Sorting

Suggested sorting options:

- Featured
- Newest
- Price: low to high
- Price: high to low
- Best selling
- Recommended

---

10. Delivery and fulfilment

Delivery coverage

Krabe Kollection should support:

- Nationwide delivery within Nigeria
- International delivery
- Store pickup

Store pickup

Store pickup should be presented as a recommended option, particularly for customers who may benefit from:

- Physical fitting
- Measurement confirmation
- Garment inspection
- Final adjustments
- Reduced sizing risk

Delivery estimates

Fixed delivery and production estimates are not required in the initial version.

The design should allow administrators to add estimates later.

Until estimates are defined, the interface should avoid promising specific delivery dates.

For time-sensitive bespoke orders, customers should be asked for their event or required date, but approval should remain subject to staff review.

---

11. Returns, exchanges and issue reporting

A return or exchange may be considered when:

- The item has not been worn.
- The request is submitted within three days of receipt.
- The delivered item is noticeably and reasonably different from the selected or approved style.
- The product satisfies any additional hygiene and condition requirements established by Krabe Kollection.

The policy should clearly explain that:

- Minor visual differences caused by lighting, photography, fabric variation or device displays may not automatically qualify.
- Bespoke items may require adjustment or correction rather than a standard return.
- Returns and exchanges are subject to inspection and approval.
- Customers should provide images and an explanation when reporting an issue.

The product should include an order-issue form where customers can:

- Select the affected order
- Choose the issue type
- Explain the problem
- Upload evidence
- Request a return, exchange, alteration or review

The legal wording of the final policy should be reviewed before launch.

---

12. Customer communication

Ready-to-wear communication

Customers should receive important order communication through:

- Signup email address

- Registered phone number
- Website account notifications

Potential updates include:

- Account verification
- Order confirmation
- Payment confirmation
- Order processing
- Ready for pickup
- Dispatch
- Delivery
- Return or issue updates

Bespoke communication

Bespoke communication should primarily use:

- WhatsApp
- Email
- Phone
- Website notifications

The customer’s preferred communication channel should be saved with their request.

---

13. Social media integration

Instagram and TikTok should be prominent.

The website should include:

- Instagram link
- TikTok link
- Social icons in the header or mobile menu
- Social links in the footer
- Social content or campaign section on the homepage
- Share actions on product pages
- Social call to action on the lookbook page

The design should encourage customers to discover styling content, campaign videos and new releases through both platforms.

---

14. Admin dashboard

The platform should include a secure staff and administrator dashboard.

14.1 Dashboard overview

The dashboard should summarise:

- Total orders
- Ready-to-wear orders
- Bespoke requests
- Orders requiring action
- Pending quotes
- Pending payments
- Orders in production
- Orders ready for pickup
- Orders awaiting dispatch
- Low-stock products
- Recent customers
- Upcoming appointments
- Return or issue requests

14.2 Product management

Staff should be able to:

- Add products
- Edit products
- Archive products
- Upload product images
- Add product descriptions
- Set product categories
- Set gender classifications
- Manage sizes
- Manage colours
- Manage fabrics
- Set prices
- Set stock quantities
- Mark products as ready-to-wear
- Mark products as made-to-order
- Mark products as sold out
- Feature products
- Manage new-arrival and best-seller status

14.3 Inventory management

Staff should be able to:

- View current stock
- Update stock quantities
- View low-stock products
- Mark a product or variation as unavailable
- Restore product availability
- Track stock at variation level where necessary

14.4 Ready-to-wear order management

Staff should be able to:

- View orders
- View customer information
- Confirm payment
- Change order status
- Add tracking information
- Assign delivery or pickup
- Add internal notes
- Contact the customer
- Process cancellations
- Review return requests

14.5 Bespoke management

Staff should be able to:

- View bespoke submissions
- Review uploaded inspiration images
- Review measurement details
- Request missing information
- Create and send quotes
- Revise quotes
- Record customer approval
- Record payment arrangements
- Update production status
- Upload progress images
- Add internal production notes
- Request a fitting
- Mark an outfit as ready
- Assign delivery or pickup
- Close or cancel a request

14.6 Quote management

The quote system should support:

- Quote reference
- Customer information
- Outfit description
- Cost breakdown
- Total price
- Quote notes
- Expiration date where appropriate
- Quote status
- Customer acceptance
- Customer rejection
- Revision requests

- Payment status

14.7 Appointment management

Staff should be able to:

- View requested appointments
- Approve appointments
- Decline appointments
- Propose another time
- Mark appointments as completed
- Add appointment notes
- Link appointments to customers and bespoke requests

14.8 Customer management

Staff should be able to:

- View customers
- View customer order history
- View bespoke history
- View measurement profiles
- View communication preferences
- Add internal notes
- Restrict accounts when necessary

14.9 Discount management

Staff should be able to:

- Create discount codes
- Set validity dates
- Set usage limits
- Set minimum order values
- Restrict discounts to selected products or collections
- Activate or deactivate discounts

14.10 Content management

Staff should be able to manage:

- Homepage banners
- Featured collections
- Lookbook content
- Brand story
- Frequently asked questions
- Working hours
- Contact details
- Store details
- Social media links

- Policies
- Bespoke process information

14.11 Staff roles

Suggested roles include:

- Super administrator
- Store administrator
- Product manager
- Bespoke manager
- Order fulfilment staff
- Customer support staff

Access should be restricted according to role.

---

15. Core data entities

The Bubble database may include:

- User
- Staff user
- Product
- Product variation
- Product category
- Collection
- Cart
- Cart item
- Ready-to-wear order
- Order item
- Bespoke request
- Bespoke quote
- Measurement profile
- Appointment
- Payment record
- Delivery record
- Pickup record
- Order status history
- Notification
- Return or issue request
- Discount code
- Fabric option
- Colour option
- Size option
- Uploaded media
- Lookbook entry
- Site content
- Working-hours configuration

---

16. Design requirements

16.1 Design approach

The product should be designed mobile-first and then adapted for:

- Mobile phones
- Tablets
- Laptops
- Large desktop screens

The layouts should remain fully responsive rather than simply scaling a desktop design down.

16.2 Visual direction

The interface should feel:

- Premium
- Minimal
- Modern
- African-inspired
- Editorial
- Spacious
- Fashion-focused

African heritage should be communicated thoughtfully through imagery, typography, patterns, storytelling and styling rather than through excessive decoration.

16.3 User experience principles

The interface should:

- Keep shopping straightforward.
- Make bespoke ordering feel understandable.
- Clearly distinguish ready-to-wear from made-to-order and bespoke products.
- Use strong product photography.
- Avoid clutter.
- Present clear calls to action.
- Make WhatsApp accessible without allowing it to distract from ready-to-wear shopping.
- Communicate order and payment status clearly.
- Provide helpful feedback after every form submission.
- Use plain, premium and understandable language.

16.4 Required states

Designs should include:

- Loading states
- Empty states

- Error states
- Success states
- Form-validation states
- Sold-out states
- Low-stock states
- Disabled states
- Payment-pending states
- Request-under-review states
- No-order states
- No-notification states
- Offline or failed-network feedback where appropriate

---

17. Design system requirements

Claude should produce a complete design system containing:

Foundations

- Brand colour palette
- Neutral colour palette
- Semantic colours
- Typography hierarchy
- Spacing scale
- Grid system
- Border-radius system
- Shadow system
- Iconography direction
- Photography direction
- Image aspect ratios
- Motion and interaction principles

Components

- Buttons
- Text links
- Navigation bars
- Mobile navigation
- Search fields
- Form fields
- Select controls
- Radio buttons
- Checkboxes
- Upload controls
- Date and time selectors
- Product cards
- Category cards
- Collection cards
- Status badges

- Sold-out tags
- Price displays
- Quantity selectors
- Cart items
- Order cards
- Quote cards
- Notification cards
- Appointment cards
- Tables
- Pagination
- Filters
- Sort controls
- Modals
- Drawers
- Toast messages
- Accordions
- Tabs
- Breadcrumbs
- Empty-state components
- Skeleton loaders
- Admin side navigation

Each component should include relevant variants and responsive behaviour.

---

18. Required screens

Claude should design the full interface rather than a small sample.

Customer-facing screens

- Homepage
- Mobile navigation
- Shop
- Search results
- Collection page
- Filter and sorting interface
- Product details
- Sold-out product state
- Size guide
- Cart
- Sign up
- Sign in
- Forgot password
- Checkout
- Payment
- Order success
- Bespoke landing page
- Bespoke request form
- Image-upload state

- Measurement selection
- Measurement form
- Appointment booking
- Bespoke request success
- Quote details
- Customer dashboard
- Customer profile
- Saved addresses
- Measurement profiles
- Ready-to-wear order history
- Bespoke request history
- Order details
- Order tracking
- Notifications
- Return or issue request
- Lookbook
- About
- Contact
- Frequently asked questions
- Delivery and pickup policy
- Returns policy
- Privacy policy
- Terms and conditions
- General error page
- Empty and loading states

Admin screens

- Admin sign in
- Admin overview dashboard
- Products list
- Add product
- Edit product
- Product variation management
- Inventory
- Ready-to-wear orders
- Ready-to-wear order details
- Bespoke request list
- Bespoke request details
- Quote creation
- Quote revision
- Bespoke production tracking
- Appointments
- Customers
- Customer details
- Returns and issue requests
- Discount codes
- Lookbook management
- Homepage content management
- Site settings
- Working-hours settings

- Staff accounts and permissions
- Notifications or activity log

---

19. Accessibility

The design should consider:

- Sufficient text contrast
- Readable font sizes
- Keyboard-friendly navigation
- Visible focus states
- Clear form labels
- Helpful validation messages
- Alternative text for meaningful images
- Touch targets suitable for mobile devices
- Avoiding colour as the only status indicator
- Accessible modals and menus

The target should be broadly aligned with WCAG 2.1 AA principles.

---

20. Bubble implementation considerations

The UI and workflows should be realistic for implementation in Bubble.

The design should account for:

- Bubble reusable elements
- Responsive containers
- Repeating groups
- Option sets
- Privacy rules
- User roles
- Conditional visibility
- Custom states
- File uploads
- Backend workflows
- Scheduled workflows
- Payment integration
- Email and phone notifications
- WhatsApp links or integration
- Dynamic order statuses
- Admin permissions
- Search and filtering
- Product variation management

Claude should avoid proposing interactions that require unnecessarily complex custom development when Bubble-native solutions are available.

No clickable prototype is required.

The output should focus on:

- Complete visual designs
- Responsive layouts
- User flows
- Design system
- Component system
- Interaction and state specifications
- Bubble-friendly implementation notes

---

21. Success criteria

The project will be successful when:

- Customers can understand the brand immediately.
- Ready-to-wear products are easy to browse and purchase.
- Users clearly understand the difference between ready-to-wear, made-to-order and bespoke products.
- Customers can submit detailed bespoke requests without confusion.
- Customers can select a suitable measurement method.
- Customers understand when their request will be reviewed.
- Users can track ready-to-wear and bespoke orders.
- Store pickup is clearly available.
- Instagram, TikTok and WhatsApp are prominent.
- Administrators can manage the complete business workflow.
- The final interface feels premium, minimal and recognisably African.
- The design is practical to build in Bubble.
- The mobile experience is treated as the primary design rather than an adapted desktop version.

---

22. Items to confirm later

The following details remain open and should be configurable or finalised during branding and implementation:

- Final logo usage rules
- Brand colours
- Typography
- Photography style
- Store address
- Official working hours
- Appointment availability
- Currency support
- International payment rules
- Delivery providers

- Delivery charges
- Production timelines
- Ready-to-wear delivery estimates
- Full return-policy wording
- Bespoke alteration policy
- Exact measurement fields
- Quote validity period
- Payment gateway
- Email and SMS providers
- WhatsApp integration method
- Social media account links
- Taxes and duties for international orders
- Supported countries
